

Mojo AI — Kya Kar Sakta Hai / What It Can Do

<https://mojo-ai.vercel.app> — Pro version, 18 Sep 2026

1. Baat-cheet / AI Chat

1. Mojo answers questions on any topic — advice, explanations, writing help, translations, ideas, and planning. It remembers the conversation's context, so you can ask follow-up questions naturally. Recent chat history is sent with every request so answers stay relevant.
2. Mojo kisi bhi topic par jawab de sakta hai — mashwara, samjhana, likhne mein madad, tarjuma, ideas, planning. Wo guftagu ka context yaad rakhta hai, is liye follow-up sawal aaram se pooch sakte hain. Har request ke sath haal ki history jati hai taake jawab relevant rahein.

2. Tez Raftaar / Live Streaming

1. Answers appear word-by-word on the screen as they are generated — no waiting for the full reply. The first word arrives in about 1 second. The app warms itself up on first open, so there is no cold-start delay.
2. Jawab lafz-ba-lafz screen par aata hai — poora intezaar nahi karna parta. Pehla lafz taqreeban 1 second mein aa jata hai. App pehli baar kholne par khud warmup ho jata hai, is liye shuru mein der nahi lagti.

3. Tasveer Samajhna / Image Understanding

1. Attach a photo and ask "what is in this image?" — Mojo looks at it and describes what it sees. Large images are automatically resized before upload. If an image is too large, you get a clear message instead of a silent failure.
2. Photo attach karke poochein "is mein kya hai?" — Mojo dekh kar batayega. Bari image upload se pehle khud choti ho jati hai. Had se bari image ho to wazeh message milta hai, chup-chaap fail nahi hota.

4. Voice Sunna / Voice Input

1. Tap the mic and speak — your words are transcribed and understood. Voice language is selectable in Settings Voice: Urdu, Hindi, or English (default is Urdu).
2. Mic dabayen aur bolein — aap ki baat likh kar samjhi jayegi. Settings Voice mein language select karein: ودرا, हन्दी, English (default ودرا hai).

5. Voice Bolna / Spoken Replies

1. Replies are spoken aloud, starting from the very first sentence — no waiting for the full answer. Tapping Stop halts both the text and the speech. Note: the spoken voice comes from your phone/browser's own system voices; where an Urdu/Hindi voice is installed, it speaks clearly.
2. Jawab bol kar sunaya jayega — pehla jumla aate hi bolna shuru, poora jawab aane ka intezaar nahi. Stop dabane se likhna aur bolna dono ruk jate hain. Note: bolne wali awaz aap ke phone/browser ki system voice hoti hai; jis device mein Urdu/Hindi voice installed ho, wahan

wazeh bolega.

6. History / Conversations

1. Every conversation is saved separately and listed in the sidebar. Search through them, rename them, delete them, or start a new chat anytime. History is stored in your browser.
2. Har guftagu alag save hoti hai aur sidebar mein nazar aati hai. Search karein, naam badlein, delete karein, ya jab chahein nayi chat shuru karein. History aap ke browser mein mehfooz rehti hai.

7. Khoobsurat Jawab / Rich Formatting

1. Answers support headings, lists, links, and code blocks — all displayed cleanly. Quick-prompt chips give you one-tap starter questions on the home screen.
2. Jawab mein headings, lists, links aur code blocks sab saaf-suthre dikhte hain. Home screen par quick prompt chips hain — ek tap par tayyar sawal.

8. Stop Button / Control

1. While Mojo is generating, the send button turns into a red Stop button. Tapping it immediately stops the response — and also stops any spoken reply.
2. Jawab bantay waqt send button red Stop ban jata hai. Dabane se jawab foran ruk jata hai — aur bolta hua jawab bhi ruk jata hai.

9. Wazeh Messages / Error Handling

1. If the server is busy, the network is slow, the image is too large, or a limit is reached, Mojo explains in plain words and suggests retrying — no cryptic technical errors. If a rate limit hits, it tells you how long to wait.
2. Server masroof ho, net slow ho, image bari ho ya limit पूरी ho jaye — Mojo seedhe lafzon mein batata hai aur dobara koshish ka mashwara deta hai. Rate limit lage to bata dega ke kitni der baad try karein.

10. Har Device / Every Device

1. Works on Android, iPhone, tablets, laptops, and desktops — full-screen, touch-friendly layout that adapts to any screen.
2. Android, iPhone, tablet, laptop, desktop — sab par kaam karta hai. Full screen, touch-friendly layout jo har screen ke hisaab se dhal jata hai.

11. Privacy aur Hadood / Privacy & Limits

1. Your API key lives only on the server — never in the browser, the code, or any log. Fair-use limits: 30 requests/minute and 300/day per IP on the server, plus roughly 50 free AI requests per day from the key provider.
2. Aap ki API key sirf server par hai — browser, code ya kisi log mein kahin nahi. Munsifana istemal ki had: server par 30 requests/minute aur 300/day fi IP, aur key provider ki taraf se roz

taqreeban 50 free AI requests.

Kya Nahi Kar Sakta / Limitations

- 1.** No live web browsing — cannot fetch fresh news, prices, or live scores. Cannot control your phone or PC — no calls, messages, calendar access, or files. History lives only in the browser where you used it — it does not sync to other devices. Answers can occasionally be wrong — verify before important decisions. No software can guarantee literally zero errors — but every error is now caught and explained in plain words.
- 2.** Live internet browsing nahi — taaza khabrein, rates ya live scores khud nahi nikal sakta. Aap ka phone ya PC control nahi kar sakta — calls, messages, calendar ya files us ke bas mein nahi. History sirf usi browser mein hai jahan use kiya — doosre device par sync nahi hoti. Jawab kabhi ghalat bhi ho sakta hai — ahem faislon se pehle tasdeeq kar lein. "Zero error" ki guarantee duniya ka koi software nahi de sakta — lekin har error ab pakra jata hai aur seedhe lafzon mein bataya jata hai.
